Zhermack

Zhermack

Progress, constantly. Creating value, to make the quality of the products accessible to the world. With creativity, and especially with the ability to transform every challenge into a development opportunity. To dynamically seize the market trends and understand the needs of partners, clients and customers. To make our solutions accessible worldwide. All this is the basis of Zhermack's growth, and since its foundation, over 35 years ago, the company has never ceased to develop and grow.

The clarity of the dream continues to drive Zhermack along this road, to "make you feel confident in everyday life". This is Zhermack's goal and philosophy of life. And it is a dream that is realised every day. Because everything aims at transmitting confidence. The way is charted with the awareness that Zhermack must contribute to improve oral health throughout the world, now and for future generations.

The contribution of Zhermack to people's oral health stems from the value that is given to the quality of its products. A quality that is born from scientific research and from the commitment to continuous education, to reach and always set new goals that contribute to improve the lives of people all over the world.

«Zhermack is a company that is committed with constancy to creating value, to make the quality of its products accessible worldwide. Zhermack's success resides in its ability to be creative, to transform every challenge into a growth opportunity, and to be dynamic, in order to seize the market trends and understand the needs of partners, clients and end customers».

Paolo Ambrosini
General Manager

Our solutions.

A complete range for the impression taking with a portfolio of products - alginates, condensation silicones, addition silicones - able to adapt to the specific needs of professionals from all over the world. Not only products but complete solutions: equipment designed and produced in compliance with clinical processes that systematise and simplify the daily work of professionals with impression materials; the line dedicated to the control of infections, specially designed and produced to meet the many needs of the dental practice, and lastly the offers within the scope of dental reconstruction.

We produce measurable results.

Zhermack directly manages all the working stages - from formulation to packaging, from the production of raw materials to the mixing - to produce all its solutions. Validated and controlled processes are the guarantee with which Zhermack is able to offer products that are constant in their characteristics, as well as certified in quality.

This, together with the technological and process integration adopted over time, is what makes Zhermack one of the major producers in the field of dental products.

Quality, certified. Year after year.

In 1993 Zhermack received the ISO 9001 certification for its Quality Management System. In 2007 it obtained the ISO 22716 for Cosmetics - Good Manufacturing Practices (GMP).

In 2012 the ISO 13485 certification for the Quality Management System of Medical Devices, necessary for the exportation of Zhermack products on the global market.

A system to guarantee Zhermack and its users.

Impression systems

For the last 35 years, Zhermack has been offering innovative solutions for impression taking, by constantly expanding and improving its product range. With the experience of those who directly produce the materials and control all the working phases, to always obtain high quality standards.

Materials for manual mixing and for automatic mixing, able to meet the preferences of the professional according to the technique used and the indications of the specific case. Zhermack's offer also includes gypsum for the different applications and a line of high quality disinfectants that comply with the most recent regulations.

Solutions for impression taking

Impression systems

Preparation of the material

It is important to carefully choose the **impression tray that is most suitable for the clinical case**. It does not matter whether individual (resin) or standard (plastic or metal), just that it is rigid. It is advisable to use an adhesive that ensures perfect adhesion between the impression materials and the impression tray itself. If necessary, also use the most appropriate gingival retraction system.

Zhermack offers a wide range of impression trays adapted to the indication for the specific cases: for fixed prosthesis, in metal and in plastic, and for removable prosthesis, in rigid plastic. For other cases in which it is necessary to build a custom impression tray, the light-curing plates are available.

- Hi-Tray for impression taking
- Light-curing plates
- Universal Tray Adhesive
- Elite Cord for gingival displacement

Impression taking

The success of an impression is influenced by several factors such as the technique used, the experience and the choice of the most suitable materials according to the clinical case. Zhermack proposes **different solutions such as alginates, condensation silicones and addition silicones**, each with specific characteristics, in order to satisfy the different needs of the dental practice.

- Alginates
- Condensation silicones
- Addition silicones
- Addition silicones for bite registration
- Addition silicones for transparent matrixes

Cleaning and disinfection of the impression

To protect ourselves from cross infection risks, it is necessary to correctly follow the procedures, but also to rely on effective and safe products.

Zeta Hygiene is a complete range of products for **cleaning, disinfection and sterilisation in the dental practice**, characterised by effectiveness, convenience and safety. In particular, in order to obtain a correct disinfection of the impression, Zhermack offers Zeta 7 Spray or Zeta 7 Solution.

- Zeta 7 Spray
- Zeta 7 Solution

Model casting

It often happens that the model needs to be cast directly in the practice to reproduce the state of the patient's dentition for diagnostic purposes.

This allows to assess the most suitable orthodontic treatment or prosthesis, or even only to check the occlusion.

To obtain the maximum precision, you can find within the wide range of **Zhermack gypsum** the one that is the most indicated for the applications of the dental practice.

- Elite Rock
- Elite Model
- Elite Ortho

Impression systems

Preliminary impression

A wide range of alginates that build a system with the automatic and mechanical mixing equipment, together with an alginate replacement, are the solutions that Zhermack has developed for preliminary impressions.

The characteristics of the Zhermack alginates are suitable for every application: from the different processing and setting times (normal, fast and extra-fast) to chromatic variation, to dimensional stability, from 48 to 120 hours. They all stand out by their high thixotropy and their accuracy in the reproduction of details, as well as ease of use. They mix easily and their homogeneous texture ensures excellent levels of elasticity and dimensional stability. They also have a pleasant scent, which helps the patient overcome any fears during the impression taking. The addition silicone, an alginate replacement, adds to the traditional characteristics of the alginates the advantages of high dimensional stability, greater flexibility and a better recovery from deformation, in addition to a greater tear resistance.

Hydrogum 5 | Hydrocolor 5

High dimensional stability alginates

Impression systems / Preliminary impression

Hydrogum 5 and **Hydrocolor 5** are the high dimensional stability solutions studied by Zhermack, which will allow to have more time for the casting of the model after the impression taking, thus overcoming working time that is often too tight, and simplifying the daily work of the dentist. They enable the impression to be cast up to 5 days after the impression is taken, thus obtaining precise and reliable models.

Hydrogum 5 is an extra-fast setting alginate, with a homogeneous consistency and an accurate reproduction of details. It ensures less stress for the patient, thanks to the time in mouth of only 45 seconds.

Hydrocolor 5 is a chromatic alginate, with a pleasant berry scent, easy to use thanks to the three processing steps that clearly indicate the mixing phase (fuchsia), when the alginate is ready to be loaded on the impression tray (violet) and when it can be inserted into the patient's mouth (light blue).

Characteristics

- High dimensional stability
- Quick working and setting times
- Thixotropy
- Pleasant scents
- Hydrocolor 5 is a chromatic alginate which changes colour to guide the dentist during the 3 processing stages
- Can be mixed with Hurrimix² or Alghamix II

Advantages

- Long dimensional stability of impressions (5 days of dimensional stability)
- Easy mixing
- Homogeneous mass, smooth, compact surfaces

Hydrogum 5

Hydrogum 5

Hydrogum 5

Neocolloid is a high precision alginate developed to obtain accurate preliminary impressions and precise prosthetic results.

Its high precision makes it the ideal choice for dentists specialized in removable prostheses. The extended working time (2 minutes) give the dentist the possibility to operate in a more precise manner and with greater peace of mind.

Characteristics

- High Precision
- Normal working time
- Low thixotropy
- Can be mixed with Hurrimix² or Alghamix II

Advantages

- Fast water absorption
- Easy mixing
- Homogeneous mass, smooth and compact surfaces
- Injectable

Neocolloid

Neocolloid

Neocolloid

Orthoprint is a specific alginate for orthodontic use that combines precision and practicality.

Highly elastic and suitable for impression taking even in the presence of brackets. It is characterized by extra-fast working and setting times to allow for the quick removal of the impression from the oral cavity, while recording even the smallest details.

Its vanilla scent, with emetic reflex reduction, helps patients to overcome any fears.

Characteristics

- Highly elastic alginate
- Extra-fast working and setting times
- Vanilla scent
- Can be mixed with Hurrimix² or Alghamix II

Advantages

- Fast water absorption
- Easy mixing
- Emetic reflex reduction

Orthoprint

In addition to the alginates with specific characteristics, the wide Zhermack range also allots an important place to the universal alginates, to meet the many needs of daily clinical practice.

Like **Hydrogum** and **Hydrogum Soft**, that are particularly elastic and resistant.

Or like the chromatic alginates **Tropicalgin** and **Phase Plus**, designed to highlight in an easy and immediate way the processing steps through their colour change.

Characteristics

- Fast working and setting times
- Thixotropy
- Tropicalgin and Phase Plus are chromatic alginates which change colour to guide the dentist during the 3 processing stages
- Can be mixed with Hurrimix² or Alghamix II

Advantages

- Easy mixing
- Homogeneous mass, smooth, compact surfaces
- All purposes

Hydrogum

Hydrogum Soft

Freealgin is a medium viscosity addition silicone, used in substitution of traditional alginates for preliminary impression taking.

One of its advantages is its high dimensional stability (superior to alginates), which ensures flexibility in the impression casting times and greater accuracy. Greater elasticity, a better recovery from deformation and a higher tear resistance also complement its characteristics. For automatic mixing, the packaging is also available in a 5:1 ratio, which is quick and convenient.

Freealgin

Characteristics

- 1:1 and 5:1 mixing ratio
- Thixotropy
- Biocompatibility
- Mangosteen scent

Advantages

- High tear resistance
- Excellent recovery from deformation
- High dimensional stability

Impression systems

Master impression

Knowledge, technique, high quality materials. In other words, the optimal impression. The right one, which meets the dentist's requirements. Addition or condensation silicones, to obtain an accurate and precise impression, with a long dimensional stability (especially for A-Silicones) and high tear resistance.

On the basis of the clinical situation, the dentist can choose materials with a longer or shorter working time. Furthermore, Zhermack silicones are biocompatible and characterized by pleasing scents, to ensure a greater comfort to patients.

ADDITION SILICONES

Hydrorise	26
Hydrorise Implant	30
Elite HD+	34
Elite P&P	38

CONDENSATION SILICONES

Zetaplus	44
Oranwash	44
Thixoflex	44
Indurent Gel	44
Zetaflow	44
Orthogum	48

High performance for **Hydrorise**, the hyper-hydrocompatible A-Silicone for high precision impression, which adapts to different impression techniques (double step impression, simultaneous impression with double viscosity and monophasic impression) in various clinical situations.

The exclusive AMDA (Advanced Moisture Displacement Action) technology, developed by the Zhermack research, favours a precise reproduction of details in the humid environment of the mouth, while preserving the integrity of the impression margins due to its tear strength. Its excellent hydrocompatibility ensures a greater fluidity of the silicone, which adapts perfectly to different dental morphologies and considerably improves the quality of the impression. Hydrorise was also formulated to meet the needs of the patient: thanks to its thixotropy, the silicone does not flow in the mouth during impression taking. The synergy of its physical and mechanical properties make Hydrorise a precise and reliable silicone for professionals as they can optimize their working times and also increase the comfort of the patient during impression taking.

Characteristics

- Mixing ratio 1:1 or 5:1 with the 380 ml cartridges
- Ideal working time/setting time ratio:
 - Long working time
 - Shorter permanence in the oral cavity
- Biocompatibility
- High hydrocompatibility
- Thixotropy
- Mint scent
- Normal and fast setting for all 6 viscosities

Advantages

- Maximum precision in detail reproduction
- Resistance to deformation
- Excellent elastic recovery
- High dimensional stability
- Less waste of material with the 5:1 automatic mixing system

Hydrorise Implant

A-Silicone

Impression systems / Master impression

Hydrorise Implant is a scannable radiopaque A-Silicone specific for implantology, developed by Zhermack R&D to complete the Hydrorise range. It achieves the best performance in edentulous arches with more than two implants.

Characterised by a high final hardness, it allows to obtain an accurate impression that detects the three-dimensional position of the implant with precision before transferring it to the laboratory.

Available in three viscosities - Heavy, Medium and Light Body - in order to combine the need for rigidity with the one for detail reproduction, it can be used with monophasic (Medium Body) and simultaneous, two viscosities (Heavy and Light Body) techniques.

Hydrorise Implant does not change its consistency when it comes into contact with oral fluids, and thanks to its thixotropy it does not flow in the mouth during impression taking. It has an ideal working time to allow the user to work calmly, even in the most complex cases. At the same time, setting time is short, assuring a greater comfort to the patient.

It is packed with automatic mixing cartridges to simplify and speed up the mixing phase, reducing the possibility of contamination or of making mistakes during the application. Moreover, it can be used with the main impression trays on the market (standard in plastic or steel, or custom in resin).

Characteristics

- Mixing ratio 1:1 (Hydrorise Implant Light Body 50 ml)
- Mixing ratio 5:1 (Hydrorise Implant Medium Body 380 ml, Hydrorise Implant Heavy Body 380 ml)
- High final hardness
- Hydrocompatibility
- Thixotropy
- High consistency
- Radiopacity
- Biocompatibility
- Scannability without using matting sprays
- Colors: Pink - Hydrorise Implant Light Body; Blue - Hydrorise Implant Medium Body; Violet - Hydrorise Implant Heavy Body
- Mint scented

Advantages

- High rigidity and accuracy of the impression in transferring the three-dimensional position of the implant (Heavy and Medium Body)
- Optimal detail reproducibility of soft tissues around the transfer (Light Body)

Hydrorise Implant Medium Body

Hydrorise Implant Heavy - Light Body

Hydrorise Implant Heavy - Light Body

- Ideal Snap-Set for complex multi-unit implant cases:
 - Long working time
 - Shorter permanence in the oral cavity
- High dimensional stability, typical of A-Silicones
- High thixotropy: the material does not flow in the mouth of the patient
- Disinfectability
- Biocompatibility to reduce possible tissue reactions and post-operation infection risk
- Immediate impression readability by the dentist thanks to easily readable colors
- Ease of use (mixing and dosing) thanks to the self-mixing cartridges
- Compatibility with the main 5:1 automatic mixers on the market
- Easy development and removal of the model from the impression by the dental technician
- 3 years shelf-life

Packaged in the 5:1 automatic mixing system

Elite HD+ is an addition silicone that combines the effects of nanotechnology with hydro-compatibility, thus guaranteeing high performance in a variety of clinical conditions, even the most difficult.

The nanoparticles contained inside the silicone increase its flowability to reach the less accessible spaces of the gingival sulcus. The combination of nanotechnology and hydrocompatibility allows you to obtain the information quickly and therefore considerably reduce the risk of bubble formation. It is indicated for the traditional fixed and removable prosthesis in the double, monophase and single step impression techniques.

Available in 3 different packagings according to the type of mixing (manual, mechanical or automatic) and with 6 different consistencies. All high consistency materials, including Putty, can be mixed in a fast and easy way with the automatic mixer for Zhermack 380 ml cartridges with a 5:1 ratio.

Characteristics

- Mixing ratio: 1:1 for the cartridge in the 50 ml format or 5:1 for the cartridges in the 380 ml format
- Hydrocompatibility
- Thixotropy (except the super light)
- Ideal working time/setting time ratio
 - Long working time
 - Shorter permanence in the oral cavity
- Different colours according to the viscosity
- Available in tubes also (Regular and Light Body)

Advantages

- Resistance to deformation
- Excellent elastic recovery
- High dimensional stability
- Opaque pigments for improved detail reading (Elite HD+ Tray Material, Monophase, Regular Body, Light body and Super Light Body)

Elite HD+ Putty - Light Normal Setting

Elite HD+ Putty - Light Fast Setting

5:1 Packaged in the 5:1 automatic mixing system

Elite P&P, Precision & Performance, is the line of A-Silicones indicated for impression taking in the single step technique with two viscosities or in double step impression.

Elite P&P is available in three viscosities putty, regular and light, and is a product that meets the different needs of the dental practice.

The light and regular formulas are of immediate and easy use. They are available in comfortable self-mixing cartridges which allow a fast extrusion of the material, and in 1:1 ratio tubes (which do not require the use of a dispenser). It may be the solution for users of C-Silicones that wish to experience a material which is more precise than the one normally used. Impressions taken with Elite P&P remain stable over time, allowing accurate models, even after two weeks.

Characteristics

- 1:1 mixing ratio
- Thixotropy
- Ideal working time/setting time ratio
 - Long working time
 - Shorter permanence in the oral cavity
- Biocompatibility
- Available in tubes also (Regular and Light Body)

Advantages

- High accuracy in the reproduction of details
- High tear resistance
- Excellent recovery from deformation
- High dimensional stability

Spatula for silicones

Impression trays on page 62 and the following.

High performance condensation silicones for impressions in fixed and removable prostheses. A Zhermack quality guarantee, for over 35 years.

More economical than addition silicones or polyethers, they are characterized by a good accuracy and an ideal working time/setting time ratio. They reach an extraordinary thixotropy thanks to the "Flow Conditioning" effect, which gives the material a high stability in the quiescent state. Pressure, moisture and heat, which are conditions that prevail when introducing the impression tray in the oral cavity, immediately increase the fluidity of the material and guarantee an impression taking that is very precise along the edges. The different scents, from mint to orange, make the treatment more pleasant for the patient and professionals.

Characteristics

- High initial flowability and excellent rigidity after hardening for the putties
- Thixotropy for the washes
- High tear resistance

Advantages

- Excellent relation between rigidity and elasticity
- Ideal working time/setting time ratio
- High flowability and accuracy of wash materials
- Putty and wash materials with the same catalyst (one for Zetaplus System and one for Zetaflow System)

Zetaplus - Oranwash

Zetaplus - Oranwash

For the mechanical mixing of the fluid materials we recommend to use Alghamix II with the appropriate mixing disk with dosing scale. More details on page 124

Orthogum is a special very high viscosity and fast setting silicone, specially designed for impression taking in orthodontics.

It is characterized by a high elasticity and a pleasing chewing-gum scent which allows emetic reflex reduction, for an impression taking that reduces stress for the operator and that it is much more comfortable especially for patients in the paediatric age.

Characteristics

- Fast setting
- High elasticity
- High tear resistance

Advantages

- Precise impressions in the presence of fixed orthodontic appliances
- Fast and easy mixing with the gel catalyst
- Good dimensional stability and possibility of casting the model within a maximum time of 72 hours
- Possibility of obtaining several models with the same impression
- Pleasant scent

Transparent matrix

Elite Glass is the addition silicone recommended for the construction of highly transparent matrices that allows to resolve multiple imperfections with excellent aesthetic results. It is used in the most modern therapeutic protocols. For sophisticated services it is suitable for an aesthetic restoration that satisfies every patient, even the most demanding.

A-SILICONE

Elite Glass 52

Elite glass is an addition silicone specific for the creation of transparent matrices for aesthetic reconstructions in light-curing composite, with direct technique and indirect technique.

Its high transparency and correct processing time make it particularly effective for dischromy, diastemia, fractures, rotation, conoids and other types of dental malformations.

Characteristics

- Precise because dimensionally stable over time and after disinfection
- High final hardness (70 Shore A)
- Easily repositionable in mouth once polymerized
- After polymerization can be finished with cutters or other sharp tools

Advantages

- High transparency of the material
- Excellent photopolymerization of the composite used for restoration
- High quality standards of the aesthetic restoration
- Versatility of use

Bite registration

The exact reproduction of the occlusal plane between the arches is essential for the correct execution of a prosthetic product. A perfect impression is not enough as you also need a complete reproduction of the bite. This can be obtained by using materials which are remarkable by their high ease of use and fidelity in bite registration thanks to their hardness, with the advantage of having a consistency that is imperceptible to the patient.

Because of their versatility, they are used in the occlusal registration in fixed or removable prostheses, from standard applications to special applications. The Zhermack range of bite registration products also offers materials for bite registrations that are compatible with most optical reading CAD-CAM systems.

A-SILICONES FOR BITE REGISTRATION

Occlufast Rock	56
Occlufast CAD	56
Colorbite D	56
Colorbite Rock	56

Occlufast and **Colorbite** are specific A-Silicones for bite registration. Their consistency is imperceptible to the patient, they have a high hardness that allows an easy milling and avoids compressions and incorrect repositioning.

They are easy to place and very precise, and are particularly indicated for bite registrations of maximum intercuspation, intermaxillary centric, protrusion or lateral registration keys. They also provide a valid solution for gnathologic evaluations and for the diagnosis of skull-cervico-mandibular disorders and for the centric occlusion in orthodontics.

Colorbite D and Colorbite Rock are thermochromic addition silicones that change colour according to the temperature and indicate when setting time is complete to minimize the possibility of error.

Occlufast CAD

Occlufast

Characteristics

- Imperceptible consistency
- Minimum permanence in the oral cavity
- Thixotropic: allows you to easily control the positioning on the occlusal plane
- High final hardness (95 Shore A)

Advantages

- Imperceptible to the patient who closes in a natural way
- Easy handling and bubble-free thanks to the cartridge mixing
- Accurate and stable impressions
- Positioning control
- Flowable to avoid pressure and slipping during positioning
- High dimensional stability
- Does not need to be heated for use like wax (greater comfort for the patient)
- Occlufast CAD is compatible with optical reading, laser and tactile CAD-CAM scanners

Occlufast Rock

Occlufast Rock

Colorbite

Characteristics

- Thermochromic: a technology which uses temperature-sensitive pigments
- Can be repositioned for a check after setting
- Easy to finish
- Colorbite Rock: raspberry scent, purple color at 23 °C (73 °F) and pink over 30 °C (86 °F)
- Colorbite D: lime scent, green color at 23 °C (73 °F) and yellow over 30 °C (86 °F)
- Quick setting in the oral cavity

Colorbite D

Advantages

- Colorbite D: extremely rigid and hard (45 Shore D)
- Imperceptible to the patient who closes in a natural way
- The thermochromic pigments indicate the completed setting and allow you to visually check the various phases, thus minimizing the possibility of error
- Easy to position
- High dimensional stability
- Does not need to be heated for use like wax (greater comfort for the patient)
- Visible control of the various steps

Relining

For a correct adaptation of the prosthesis to the concerned mucosa, to maintain its stability and preserve its oral functionality, Zhermack proposes the Elite Relining materials.

They are easy to use and provide immediate relief to the patient in a single appointment, save chair time and have long-term results. They have an ideal consistency, a neutral flavour and the pink colour is providing pleasing aesthetics.

A-SILICONE FOR RELINING

Elite Soft Relining 62

RESIN FOR RELINING

Elite Hard Relining 63

Elite Soft Relining

A-Silicone for relining

Impression systems / Relining

Elite Soft Relining is an A-Silicone for the preparation of soft relining on complete, partial or rehabilitation prostheses.

Easy to use, it is particularly indicated for direct application in the dental practice as well as in the laboratory.

Characteristics

- 1:1 Mixing ratio
- Excellent bonding to prosthetic base with Zhermack Elite Relining Primer special adhesive
- In order to obtain smooth and stable edges, use the special Zhermack Varnish A+B on the margins
- Odourless and tasteless
- Pink Colour

Advantages

- Ease of use
- Elastic memory to make the prosthesis more stable
- It permits masticatory load absorption
- Suitable for direct use in the practice and for indirect use in the laboratory
- Chair time saving and immediate comfort for the patient

Product	Working time* (min:s)	Trimming time* (direct method) (min:s)	Time in mouth* (direct method) (min:s)	Elastic recovery	Linear dimensional change (after 24 h)	Hardness (Shore A)

Elite Hard Relining

Resin for relining

Impression systems / Relining

Elite Hard Relining is a rigid and self-curing resin for direct relining in the dental practice of complete or partial dentures.

Characteristics

- Easy and fast working
- Odourless and tasteless
- Pink colour

Advantages

- Highly tolerable by the patient
- Develops low temperatures during polymerization
- The colour does not interfere with the existing prosthetic base

Product	Powder/liquid mixing ratio	Curing time* (min:s)	Water absorption	Water solubility
Elite Hard Relining	2.2 g / 1.4 ml	30:00	max 32 µg/mm ³	max 8 µg/mm ³

Impression systems

Accessories

To meet the needs of dental professionals, Zhermack offers everything needed for taking an impression. Completing the wide range of impression materials is a series of accessories specifically designed to improve the quality of impression taking.

A wide range of specific impression trays according to the needs of the clinical case: fixed prosthesis - metal and plastic - and for removable prostheses - rigid plastic. In addition when it is necessary to have a custom tray, the light-curing resins are available. An adhesive to increase the adherence between the tray and the material. A wide range of retraction cords to correctly prepare the gingival margin. Solutions developed to increase the productivity of the dental practice.

Hi-Tray Metal

Metal impression trays

Impression systems / Accessories

Zhermack offers a wide range of impression trays for fixed prosthesis, in metal and in plastic, and for removable prosthesis, in rigid plastic. The Zhermack range of impression trays is also suitable for many uses such as models in the practice, bruxism bites, whitening masks, sports masks for bites, impressions for custom impression trays, preliminary impressions, impressions for in-lay and on-lay, etc.

The **Hi-Tray Metal** are BSA stainless steel trays with 16.70 % chrome for standard applications.

Characteristics

- Can be sterilized in a cold solution or in autoclave
- Available in two versions: solid and perforated

Advantages

- High deformation resistance
- Greater precision of the impression
- Rim Lock anchoring system for a perfect adhesion of the material to the impression tray
- Excellent finishing
- Soldering point accuracy
- Durability

Single packaging in the solid impression tray version:

Size	1	2	3	4	5
Upper	D51SS	D52SS	D53SS	D54SS	D55SS
Lower	D51IS	D52IS	D53IS	D54IS	D55IS

Single packaging in the perforated impression tray version:

Size	1	2	3	4	5
Upper	D51SP	D52SP	D53SP	D54SP	D55SP
Lower	D51IP	D52IP	D53IP	D54IP	D55IP

Kit pack: 1 kit contains 5 upper trays and 5 lower trays

Hi-Tray Light Clear

Impression trays in clear plastic

Impression systems / Accessories

The **Hi-Tray Light Clear** are clear plastic impression trays for standard applications or for applications with light-curing materials.

Characteristics

- Made in clear plastic
- Available in the following versions:
 - Small upper and lower
 - Medium upper and lower
 - Large upper and lower

Advantages

- Transparent
- Disposable
- Autoclavable
- Rigid
- Perforated design for improved mechanical retention
- Reinforced grip with ribbing for a better distribution of the pressure exerted

Standard packs 12 pieces available in the following versions:

Size	Small	Medium	Large
Upper	D5CSUP	D5CMUP	D5CLUP
Lower	D5CSLO	D5CMLO	D5CLLO

Hi-Tray Light Clear upper

Hi-Tray Light Clear lower

Hi-Tray Light Plastic

Impression trays in plastic

Impression systems / Accessories

The **Hi-Tray Light Plastic** are impression trays in grey rigid plastic for standard applications.

Characteristics

- Constructed in grey rigid plastic
- Available in the following versions:
 - Small upper and lower
 - Medium upper and lower
 - Large upper and lower

Advantages

- Adaptable
- Disposable
- Rigid
- Perforated design for improved mechanical retention
- Reinforced grip with ribbing for a better distribution of the pressure exerted

Standard packs 12 pieces available in the following versions:

Size	Small	Medium	Large
Upper	D5GSUP	D5GMUP	D5GLUP
Lower	D5GSLO	D5GMLO	D5GLLO

Hi-Tray Light Plastic upper

Hi-Tray Light Plastic lower

Hi-Tray Light Edentulous

Impression trays in plastic

Impression systems / Accessories

The **Hi-Tray Edentulous** are impression trays in green rigid plastic for edentulous applications.

Characteristics

- Constructed in green rigid plastic
- Available in the following versions:
 - Small upper and lower
 - Medium upper and lower
 - Large upper and lower

Advantages

- Disposable
- Adaptable
- Rigid
- Perforated design for improved mechanical retention

Standard packs 12 pieces available in the following versions:

Size	Small	Medium	Large
Upper	D5ESUP	D5EMUP	D5ELUP
Lower	D5ESLO	D5EMLO	D5ELLO

Hi-Tray Light Edentulous upper

Hi-Tray Light Edentulous lower

Hi-Tray Light Dual Arch

Impression trays in plastic

Impression systems / Accessories

The **Hi-Tray Light Dual Arch** are impression trays in plastic for the dual arch technique in fixed prostheses.

Characteristics

- Plastic structure, of various colors
- Disposable
- Support webbing in white plastic
- Available in 5 types:
 - Full arch
 - Anterior
 - Quadrant
 - Posterior
 - Wide body posterior

Advantages

- The support webbing lets silicone through to form a single body between the upper and lower impressions
- The thickness of the support webbing is imperceptible to the patient (avoiding alterations during bite registration)
- Clear plastic lets you view the correct position of the impression tray on the preparation

Hi-Tray Light Dual Arch

Code	Packaging
D5DANT	Hi-Tray Light Dual Arch anterior 30 pcs

Elite LC Tray | Elite LC Tray ROUND

Light-curing resins

Impression systems / Accessories

Elite LC Tray is the line of light-curing resin plates for making custom impression trays and removable prosthesis bases.

Easy and quick to use, it meets the needs of the dental practice by optimising working times without compromising on quality.

Characteristics

- Cured with either halogen or UV light (3 - 5 minutes)
- Stable to daylight or artificial light for about 20'
- Available in three colours: blue, white and pink
- Minimum shrinkage after curing

Advantages

- Easy to model, not sticky
- Quick, saves time with respect to traditional self-curing resins
- Uniform thickness

Elite LC Tray

Elite LC Tray

Product	Curing time (min:s)	Thickness	Hardness (Shore D)	Curing
Elite LC Tray	3:00 - 5:00	2.5 mm	80	UV light (350 - 400 nm) Halogen light (420 - 480 nm)
Elite LC Tray ROUND	3:00 - 5:00	2.5 mm	80	UV light (350 - 400 nm) Halogen light (420 - 480 nm)

D500054	Elite LC Tray ROUND Blue (50 pcs)

Elite Cord is recommended for gingival displacement before impression taking in fixed prostheses; before adhesive reconstructions and/or restorations and in operations near the marginal tissues (for example, preparation of the sub-gingival margins).

Characteristics

- Non-impregnated cord
- Made from 100 % cotton fibre
- Interlinked knitted structure
- Each bottle contains 275 cm of cord
- Available in five thicknesses identified by different colours:
 - # 000 size (black)
 - # 00 size (yellow/black)
 - # 0 size (purple/white)
 - # 1 size (blue/white)
 - # 2 size (green/white)
- Compatible with all types of commercially available haemostatic solution

Advantages

- Easy and quick to position in the gingival sulcus thanks to its interlinked structure and high dimensional stability
- Optimal gingival displacement without trauma, thanks to the light but constant elastic pressure applied on the gingival tissue
- Effective control of the flow of fluid in the sulcus, thanks to the highly absorbent power of the 100 % cotton fibre
- Wide range of thicknesses, enabling the required gingival displacement to be obtained with all gum types

Universal Tray Adhesive

Adhesive for A-Silicones

Impression systems / Accessories

Universal Tray Adhesive is a specific adhesive for A-Silicones.

Characteristics

- Easy brushing adhesive
- Blue colour

Advantages

- Excellent bonding to metal trays
- Does not create thickness
- Fast solvent evaporation

Restorative

The preservation of natural teeth and the research of an aesthetic solution are the most important needs for patients. Improving your smile implies specific aesthetic and functional requirements which Zhermack meets with bisacrylic self-curing resins for temporary restorations and universal light-curing composites.

High quality materials, that fulfil the expectations of the patient and the professional.

Restorative

Temporary restorations

Acrytemp is the ideal choice to make provisional crowns and bridges, onlays, inlays and veneers directly in the dental practice, in an easy and fast way, with a high aesthetic impact. It is available in self-mixing cartridges, for a correct and fast application.

Its formula without methyl methacrylate monomer and the low temperature increase during setting, ensure a greater comfort for the patient and preserve tooth vitality.

RESIN FOR TEMPORARY ELEMENTS

Acrytemp 80

Acrytemp is a bisacrylic self-curing resin for the fast preparation of provisional elements in the dental practice.

It is practical to use, thanks to the self-mixing system, easy to trim and polish, with a high fracture resistance. Its particular formulation is without methyl methacrylate monomer and allows to maintain low temperatures during the setting reaction that does not irritate the pulp. Acrytemp is available in 3 shades and offers a natural aesthetic effect that reproduces the colour of teeth, to meet the needs of the patients and of the dentist.

Characteristics

- High fracture resistance
- Methyl methacrylate monomer free
- Low temperature increase during the setting reaction
- The colourings A2; A3; A3,5 allow to meet the most common clinical situations
- Natural fluorescence
- Self-mixing system in 50 ml (4:1) cartridge for an optimal dosage and time saving

Advantages

- Easy handling
- Can be easily trimmed and polished
- Respects the pulp, due to low exothermic setting reaction
- No irritations
- Natural aesthetics effect of the finished provisional elements

Restorative

Permanent restorations

For the preservation of tooth structure, and to limit the preparation of the cavities to the single damaged area, Zhermack offers the Zmack system, a line of universal light-curing composites.

To combine functionality and aesthetics and give patients of all ages their smile back, without compromising the efficiency needs of the dental practice.

SOLUTIONS FOR RESTORATIONS

Zmack Bond	84
Zmack Comp	84
Zmack Etch	84
Zmack Flow	84

The **Zmack** system offers universal light-curing composites for permanent restorations, that are used in the restoration of cavities of all classes (I, II, III, IV, V).

Zmack is indicated for the restoration of the anterior and posterior areas, for aesthetic restorations, for closing diastemas and for coronal lengthening. It is also possible to use the system for indirect restorations (inlays and onlays) and for veneer construction using direct techniques.

The Zmack System consists of: **Zmack Etch**, an etching gel; **Zmack Bond**, a self-priming adhesive; **Zmack Flow**, a flowable micro-hybrid composite and **Zmack Comp**, a universal micro-hybrid composite. Zmack Flow and Comp are available in a multi shade range for the ideal camouflage. Thanks to its physical properties, Zmack allows high level restorations in terms of quality, performance and aesthetics. The range to choose from, according to the specific clinical indication, represents a valid aid to the dentist and the secret behind the smile of each patient.

Zmack System is characterized by:

- Smart colours that mimetically blends with the surrounding tooth structure
- Polishes to match natural lustre of enamel
- Shades match to the VITA® guide
- Smart consistency, for an easier job
- Creamy formula, not sticky nor slumpy
- Self micro-leveling behavior

Zmack Comp satisfies the clinicians requirements with:

- ideal camouflage with the hard tissue of the tooth, thanks to the selected range of eight body shades plus two opaque shades for layering techniques;
- precise & easier job, thanks to the ideal consistency, Zmack Comp perfectly and effortlessly adapts to the margins without slumping;
- universal and functional results, thanks to the micro-hybrid multi-purpose formula. The excellent mechanical properties make Zmack Comp ideal for both anterior and posterior teeth.

Zmack Flow is used in direct restorations of conservative class I, III and V or as a liner and offers:

- smart flowability: great fluidity with self leveling behavior that allows a quick and easy filling and levelling of irregular cavities floors and small cavities and adaptable to cavity walls without use of hand instruments;
- smart colours: shades camouflage with surrounding tooth structure for natural looking results.

Zmack Flow

Zmack Comp

Finished restoration

Zmack Bond ensures adhesion of all the components for reliable long-lasting results. Unlike other products, Zmack Bond:

- speeds up the working time with a single coat application;
- has the ideal viscosity for homogeneous distribution and penetration without the need for brushing;
- seals the margins, preventing discoloration and restoration failure;
- prevents post-operative sensitivity.

Zmack Etch provides controlled safe conditioning of the tooth surface and prepares them for application of the adhesive, with:

- facilitated positioning, thanks to the creamy gel consistency;
- improved visibility with a clear contrasting effect provided by its blue colour;
- reduced risk of over etching, thanks to the ease of washing and contrast with the tissues.

Hygiene

Cleaning, disinfection and sterilization in a dental practice are a guarantee of protection and safeguarding against infection.

It is therefore essential to choose effective solutions with a full spectrum of action for the safety of professionals and patients. Products free of toxic substances such as phenols and aldehydes, that do not damage instruments and surfaces, with a quick action and easy to use. Products like the Zeta Hygiene range that arise from Zhermack experience in the field of medical and surgical device disinfection and cold sterilization. Innovative and comprehensive solutions, subject to strict production standards, checked and tested according to the latest European Norms. To offer the required level of protection in your dental practice every day.

Surgical and rotating dental instruments disinfectants and sterilizers

Hygiene / Instruments and burs

Zeta 1 Ultra is a concentrated liquid disinfectant and cleaner suitable for all surgical and rotating dental instruments, including the most delicate ones (scalpels, tweezers, mirror, burs, probes, etc.).

Zeta 2 Enzyme is a tri-enzymatic disinfectant and cleaner in powder specific for surgical and rotating instruments before the sterilization treatment.

Zeta 2 Sporex is a cold chemical sterilizer in powder, specific for dental instruments and particularly recommended for all medical devices that cannot be sterilized in an autoclave.

Characteristics

- Complete spectrum of action, developed and tested according to the latest European Norms validated on disinfection
- Aldehyde and phenol-free products
- Excellent compatibility with instruments

Advantages

- **Efficacy:** full protection for operators and patients
- **Safety:** free from harmful substances (aldehydes and phenols)
- **Quick and Easy to use:** Zeta 1 Ultra has a practical dosing bottle while Zeta 2 Sporex enables ultra fast sterilization

Hygiene / Surfaces

Zeta 3 Soft is an alcoholic, ready to use disinfectant and cleaner for medical devices surfaces.

Zeta 3 Wipes TOTAL are wipes impregnated with an alcoholic solution for the rapid disinfection and cleaning of small medical devices surfaces.

Zeta 3 Foam is a ready to use alcohol-free disinfectant and cleaner foam especially recommended for delicate medical devices surfaces.

Zeta 3 Wipes POP-UP are large wipes impregnated with reduced alcohol content solution for the rapid disinfection and cleansing of medical devices surfaces including the most delicate ones.

Zeta 4 Wash is a concentrated cleaner and deodorant solution for large surfaces.

Characteristics

- Complete spectrum of action, developed and tested according to the latest European Norms validated on disinfection
- Aldehyde and phenol-free products
- High compatibility with surfaces

Advantages

- **Efficacy:** full protection for operators and patients
- **Safety:** free from harmful substances (aldehydes and phenols)
- **Speed and convenience:** disinfection and cleaning in a single step

Zeta 5

Suction unit disinfectants and cleaners

Hygiene / Special applications

For the disinfection, cleaning and deodorisation of suction units. **Zeta 5** 3-in-1 action allows to disinfect, clean and deodorise with a single product, providing high protection for the professionals and patients and thus prolonging the lifetime of the dental chair. The special non-foaming and non-aggressive formula helps the constant functionality of the suction tubes, avoiding possible clogging of the dental unit.

Zeta 5 Power Act is a concentrated disinfectant and cleaner with a broad spectrum of action that allows to choose between two action times: standard evening disinfection or just 15 minutes* for rapid disinfection.

Zeta 5 Unit is a concentrated disinfectant and cleaner that protects suction units thanks to its non-foaming and non-aggressive formula.

Characteristics

- Non-foaming and non-aggressive formula on aspiration tubes
- Active in presence of organic material

Advantages

- **Efficacy:** high protection for operators and patients
- **Protection:** preserves the dental chair and prolongs its lifespan
- **Comfort:** disinfection, cleaning and deodorisation in a single product

* excluding tuberculocidal action

Zeta 5 Power Act

Product	Type of product	Active ingredients	Dilution	Action time	Distinctive characteristics	Spectrum of action
Zeta 5 Power Act	Disinfectant	Alkylamine, Quaternary Ammonium Salts	1 %	Overnight 15 minutes*	A three-in-one product for disinfecting, cleaning and deodorising in a single step	Bactericidal: EN13727, EN14561 (S. aureus, P. aeruginosa, E. hirae) Yaesticidal: EN13624, EN14562 (C. albicans) Tuberculocidal: EN14348 (M. terrae) Limited virucidal: DW/RKI, DVV (non-porous surfaces), prEN16777 towards encapsulated and lipophilic viruses including blood viruses (HIV, HBV, HCV), Herpes simplex and families of virus such as the Orthomyxoviridae (including all human and animal influenza viruses such as H5N1 and H1N1), Filoviridae (ebola virus) and Paramyoviridae (measles virus)
Zeta 5 Unit	Disinfectant	O-phenylphenol	5 %	Overnight	The action is not neutralised by the presence of organic material	Bactericidal Fungicidal Tuberculocidal Virucidal (Adenovirus, Enterovirus, Herpesviridae, HBV, HCV, HDV, HIV).

* excluding tuberculocidal action

Zeta 5 Unit

Zeta 5 Unit

Zhermack offers excellent performance products for impression disinfection. A complete spectrum (bactericidal, fungicidal, tuberculocidal and virucidal) and excellent compatibility with different types of impression material. In full compliance with the latest European Norms on disinfection.

Zeta 7 Spray is a ready to use, disinfectant spray, for a quick and easy disinfection of impressions.

Zeta 7 Solution is a full spectrum concentrated disinfectant.

Characteristics

- Complete spectrum of action developed and tested according to the latest European Norms validated on disinfection
- Compatibility with all materials for the impression taking (silicone, alginate, polyether and polysulphides)

Advantages

- **Efficacy:** complete protection for professionals in dental practices and laboratories
- **Excellent performance:** respects the dimensional stability of impressions characteristics and their compatibility with gypsum and improves accuracy in the reproduction of gypsum models

Zeta 7 Spray

Zeta 7 Spray

Zeta 7 Solution

Zeta 7 Solution

Zeta 7 Spray

Product	Type of product	Active ingredients	Dilution	Action time	Distinctive characteristics	Spectrum of action
Zeta 7 Spray	Disinfectant	Alcohols	Ready to use	3 minutes	Improve smoothness of gypsum on impressions surfaces and reduce the formation of bubbles	Bactericidal: EN 13727 (S. aureus, P. aeruginosa, E. hirae) Fungicidal: EN 13624 (C. albicans) Tuberculocidal: EN 14348, EN 14563 (M. terrae) Virucidal: EN 14476 (tested on Poliovirus, Adenovirus, Norovirus. Parvovirus including HIV, HBV, HCV)
Zeta 7 Solution	Disinfectant	Quaternary Ammonium Salts, Phenoxyethanol	1%	10 minutes	Very concentrated, allows for the preparation of up to 100 litres of disinfectant solution	Bactericidal: EN 13727 (S. aureus, P. aeruginosa, E. hirae) Fungicidal: EN 13624 (C. albicans) Tuberculocidal: EN 14348, EN 14563 (M. terrae) Virucidal: EN 14476 (tested on Poliovirus, Adenovirus, Parvovirus, Norovirus including HIV, HBV, HCV)

Algitray and **Gypstray** are ideal for the cleaning and removal of alginates and gypsum residues from trays and instruments. Guarantees deep cleaning action even in less accessible areas, protecting materials and allowing a safe use in all cases.

Algitray is a specific neutral pH cleaner for the removal of alginate residues from all types of impression trays and other instruments.

Gypstray is a ready to use solution for the removal of gypsum residues from impression trays, spatulas or other instruments.

Algitray and Gypstray

Advantages

- **Efficacy:** help eliminate all traces of alginate and gypsum even in less accessible areas
- **Protection of materials:** non-aggressive formula

Product	Type of product	Active ingredients	Dilution
Algitray	Alginate remover	Alginate dissolvers	Soluble powder: 10 % Liquid: ready to use
Gypstray	Gypsum remover	Gypsum dissolvers	ready to use

Hygiene

Hands

Zhermack products are non-aggressive to skin and offer deep cleaning and sanitizing for hand washing, an essential and frequently repeated practice.

Zeta 6 Hydra and Zeta 6 Drygel, enriched with nutrients, are protective and moisturising, respecting the skin and helping prevent irritation.

Zeta 6 Hydra 110

Zeta 6 Drygel 110

Zeta 6 Hydra is an ultra delicate cleaner for frequent use on hands and sensitive skin.

Zeta 6 Drygel is a special gel for hand cleaning and hygiene.

Characteristics

- Gentle on the skin and enriched with skin-protecting substances and nutrients
- Zeta 6 Hydra does not contain SLES and Parabens found in conventional soap
- Zeta 6 Drygel: perfumed, no rinsing required

Advantages

- **User comfort:** products that take care of the cleaning and well-being of users' hands

Zeta 6 Hydra

Zeta 6 Drygel

Zeta 6 Drygel

In order to completely fulfill the needs of users, Zhermack, has also included disposable products in its Zeta Hygiene line, to provide a complete response to user cleaning and protection needs.

Safemix Latex and **Safemix Nitrile** are powder-free gloves tested for the safe mixing of Zhermack impression A-Silicones.

Zeta Roll are rolls for sterilization in autoclave.

Characteristics

Gloves:

- Micro-rough surface for improved material handling
- Reinforced edge

Zeta Roll:

- Fully compliant with standards EN 868, ISO 11140 and ISO 11607
- High tear and perforation resistance

Advantages

Gloves:

- **High quality:** gloves do not inhibit VPS polymerisation and ensure excellent tactile sensitivity
- **Comfort:** designed for an ideal fit
- **Efficacy:** provide an excellent protective barrier

Zeta Roll:

- **Efficacy:** excellent penetration of the vapour or gas sterilising agent
- **Protection:** excellent protection from microbes, thanks to the multiple reinforced side seams and uniform impermeable channels
- **User comfort:** clear indication of successful sterilization with evident colour change of the vapour and gas process indicators

A good quality mixing is essential to obtain an impression that contains clear and precise information in order to facilitate the work of the dental technician, thus making the professionals time more efficient and increasing the satisfaction of the patient, who will not need to go back to the dental surgery for a second impression.

The Zhermack equipment is engineered to simplify and accelerate the mixing of the main impression materials: alginates, addition silicones, condensation silicones and dental gypsum.

Mixers for impression systems

Mechanical or automatic mixing quality is considerably better and faster than manual mixing, allows for greater flexibility in the organization of the work within the practice and helps to better achieve the established results.

Hurrimix² is the centrifugal mixer for alginates and gypsum, which produces a creamy and homogeneous mixture. Alghamix II is the mechanical mixer for alginates, gypsum and condensation silicones which facilitates the mixing. Modulmix is the automatic mixer for addition silicones in the 5:1 system, which makes the mixing excellent and reduces wastage of material.

Hurrimix²	122
Alghamix II	124
Modulmix	126

Hurrimix² is the Zhermack solution for mixing alginates and gypsum in the dental practice. Simple to use, it ensures fast and consistent mixing. Reliability is guaranteed by adopted technical solutions. It helps to increase working efficiency in the surgery.

Designed to enhance the quality of mixing, it is available with 20 mixing programs (10 for alginates and 10 for gypsum), including 6 (3 for alginates and 3 for gypsum) customized to meet the needs of the professionals in a simple way. The design is modern and functional and all the details are designed to ensure reliability over time.

Characteristics

- Steel-bronze gears of the motor
- Electronic motherboard with encoder
- Electromagnetic safety lock
- Polycarbonate membrane with soft touch buttons
- Large digital display for easy viewing with helpful status messages and maintenance function icon
- 20 mixing programs:
 - 10 for alginates, 7 customized for Zhermack alginates, 3 free
 - 10 for stones, 7 customized for Zhermack stones, 3 free
- Can mix up to 100 g of materials (powder + water)
- PBT reinforced shell easy to clean with alcohol free disinfectants
- Supplied with:
 - 2 spatulas
 - 1 pre-mix stick
 - 2 alginate 2 stone mixing cups with rounded surface for easy mix removal without phthalates
 - 1 dosing bottle

Hurrimix²

Hurrimix²

Advantages

- High mixing quality in a quick easy way
- Homogeneous and consistent creamy mix every time
- Designed to guarantee operational safety
- Easy to clean
- Functional and modern design suits the need of dental clinics
- 4000 cycles or 4 years warranty guarantees a lifespan longer than competitors

Alghamix II

Mixer for alginates, gypsum and condensation silicones

Equipment / Mixers for impression systems

Alghamix II is the mixer which facilitates and simplifies the mixing of alginates, condensation silicones and dental gypsum. Its use reduces air incorporation during mixing, for an even mixture with less bubbles and without lumps.

Its structure and design are specifically designed to guarantee maximum stability during use. In particular, the ergonomic bowl position provides the practitioner with optimal operating conditions, thereby facilitating the dosing and mixing operations. It is also suited for mixing low viscosity condensation silicones by using the appropriate mixing disk.

Characteristics

- 2 speed bowl rotation
- Ergonomic speed selector
- Bayonet bowl-fastener
- Available bowls: small 350 cc for alginate, large 600 cc for gypsum
- Available bowl colours: grey and blue
- Plate with 20-sheet mixing block for silicones
- Easy to clean ABS body

Advantages

- Homogeneous mixture without bubbles or lumps
- Constant bowl rotation guaranteed by the two speeds
- Easy to remove and easy to clean bowl
- 600 cc bowl for gypsum and silicone mixing plate usable for various purposes
- 3 year warranty

Modulmix

Automatic A-Silicone mixer with a 5:1 mixing ratio

Equipment / Mixers for impression systems

Modulmix, the automatic A-Silicone mixer with a 5:1 mixing ratio, offers high performance, excellent quality and functionality. It mixes evenly and without air bubbles all Zhermack products in 5:1 ratio (putty, heavy body and monophase) and is compatible with the main 5:1 systems present on the market.

The mixing with Modulmix is easy, constant and of higher quality than manual mixing. The mixing phase is notably reduced to give more product working time, which simplifies the work of the professional. Compact and linear design which guarantees reduced encumbrance upon working surfaces. The transparent plastic cover allows for immediate viewing of both the material being used and the level of material remaining in the cartridge.

Characteristics

- Two dispensing speeds:
 - Normal: 70* ml/min
 - Fast: 155* ml/min
- Motorised plungers (forward & reverse) for changing cartridges (max 3 sec)
- Ergonomic and compact design
- Two speed dispenser buttons
- Cartridge level indicator
- Retracting, finger-safe pistons to guarantee maximum safety standards
- Available in 230 V and 115 V countertop or wall-mounted versions
- Compatible with main 5:1 systems currently available on the market
- Digital timer provided

Advantages

- The high dispensing speed allows to accelerate the impression taking phase
- Double actuation button positioned on both sides of the machine to facilitate the view on the impression tray during filling
- Double speed automatic mixing combined with the innovative Zhermack dynamic-static mixing tip guarantees the maximum mixing uniformity (without air bubbles) while maintaining unchanged the reactivity of the product
- 2 year warranty

Equipment

Solutions for hygiene

The proper cleaning of the dental instruments requires equipment that combines safety and efficacy, technology and practicality. For the disinfection and sterilization of instruments and burs, Zhermack has developed an ultrasonic bath, Zeta Sonic; an autoclave, Zetaclave, and a thermosealer.

Safe and effective, with a high respect for the materials; practical, for immediate and simplified handling; technologically advanced and with a contemporary design.

ULTRASONIC BATH

Zeta Sonic 130

AUTOCLAVE

Zetaclave B 132

Thermosealer 133

Zeta Sonic is an ultrasonic bath for a rapid and deep cleaning and disinfection of dental, surgical and prosthodontic instruments in metal, plastic, glass, ceramic or other materials.

Characteristics

- Stainless steel bath
- Waterproof display
- Innovative sweep and degas function
- Display to regulate time and temperature
- Auto-OFF (after 12 hours)

Advantages

- **Certified Effectiveness:** when used in combination with Zeta 1 Ultra, performs disinfection and cleaning at the same time, thus minimising the decontamination risk and providing the operator greater protection and security
- **Practicality:** designed to improve and standardise the steps of cleaning and disinfection of the instruments. Allows to preset time and temperature in the first use and maintain this setting in subsequent uses
- **Smart machine:** maintains the temperature set during use and turns off by itself after 12 hours

Zetaclave B

Autoclave

Equipment / Solutions for hygiene

Zetaclave is a class B autoclave for the sterilization in surgery of solid instruments, hollow instruments (type A and B), packeted instruments and porous loads in full compliance with European regulation EN 13060. Zetaclave B meets all the requirements for a safe sterilization while offering speed and high performance.

Characteristics

- Instant vaporizer outside the chamber
- Self-registering motorised closure with triple safety device
- Stainless steel chamber, pressed in a single block without welds (for perfect hygiene)

Zetaclave

Advantages

- **Maximum security for the professional and his patients:** a guarantee of high safety through constant controls by incorporated probes
- **Easy to use and intuitive:** thanks to the graphic display and a complete list of pre-set cycles

Code	Model	Size (L x D x H - mm)	Weight (kg)	Power supply (V/Hz)	Total power (W)	Chamber dimensions (Ø x D - mm)	Maximum altitude of use (m)	Tank capacity (l)

Thermosealer

Thermosealing machine

Equipment / Solutions for hygiene

Manual **thermosealing machine** for sterilization rolls.

Characteristics

- High sealing speed
- Sealing area width 310 mm
- Intelligent validation thanks to the luminous warning indicator during use

Advantages

- **Quality:** guarantees perfect sealing in a few seconds
- **Practicality:** the sealing lever is ergonomically designed and positioned frontally to simplify the packaging operations

Manual thermosealing machine

Code	Model
XR0150060	Manual thermosealing machine

Model casting

It often happens that the model needs to be cast directly in the practice to reproduce the state of the patient's dentition for diagnostic purposes. This allows to assess the most suitable orthodontic treatment or prosthesis, or even only to check the occlusion. To obtain the maximum precision, you can find within the wide range of Zhermack gypsum the one that is the most indicated for the applications of the dental practice.

Elite Rock is an extra hard stone for master models in fixed prosthesis applications. Thanks to its special formula optimised for reading with CAD/CAM systems, models made with Elite Rock in Silver Grey are scannable without using reflective sprays.

Elite Model is a dental stone indicated for making antagonists or study models.

Elite Ortho is a dental stone for the production of models for orthodontics and antagonists.
